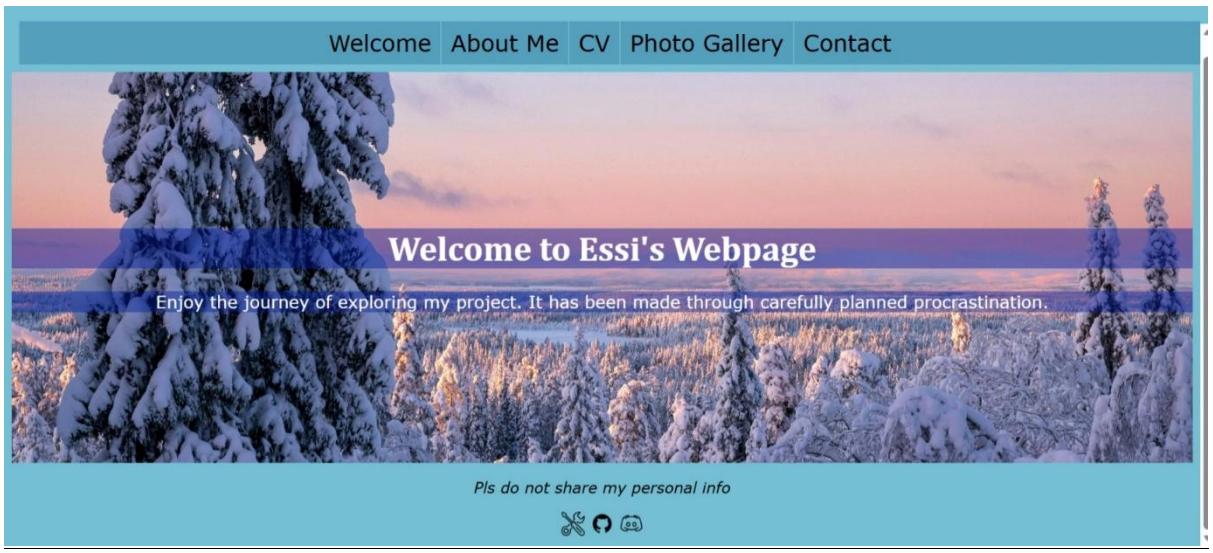
Documentation for Web Tech Assignment 1



Welcome Page:

```
/* WELCOME PAGE WELCOME PAGE WELCOME PAGE*/
.welcome-page {
    background-image: url('/Images/panorama2.JPG');
    height: 410px;
    background-repeat: repeat;
    background-size: cover;
    color: white;
    text-align: center;
    align-content: center;
    font-size:large;
}
.welcome-page p, h1{
    background-color: #001ba16e
}

footer{
    text-align: center;

}

```

- I had some trouble styling the background image, it was always zooming in too much.
- “background-size: cover” fixed it for me

About Me – Page

- I added some silly stuff here
- To make this page, I followed our exercise from one of the virtual sessions
- I wanted to implement responsive design also here but I ran out of time

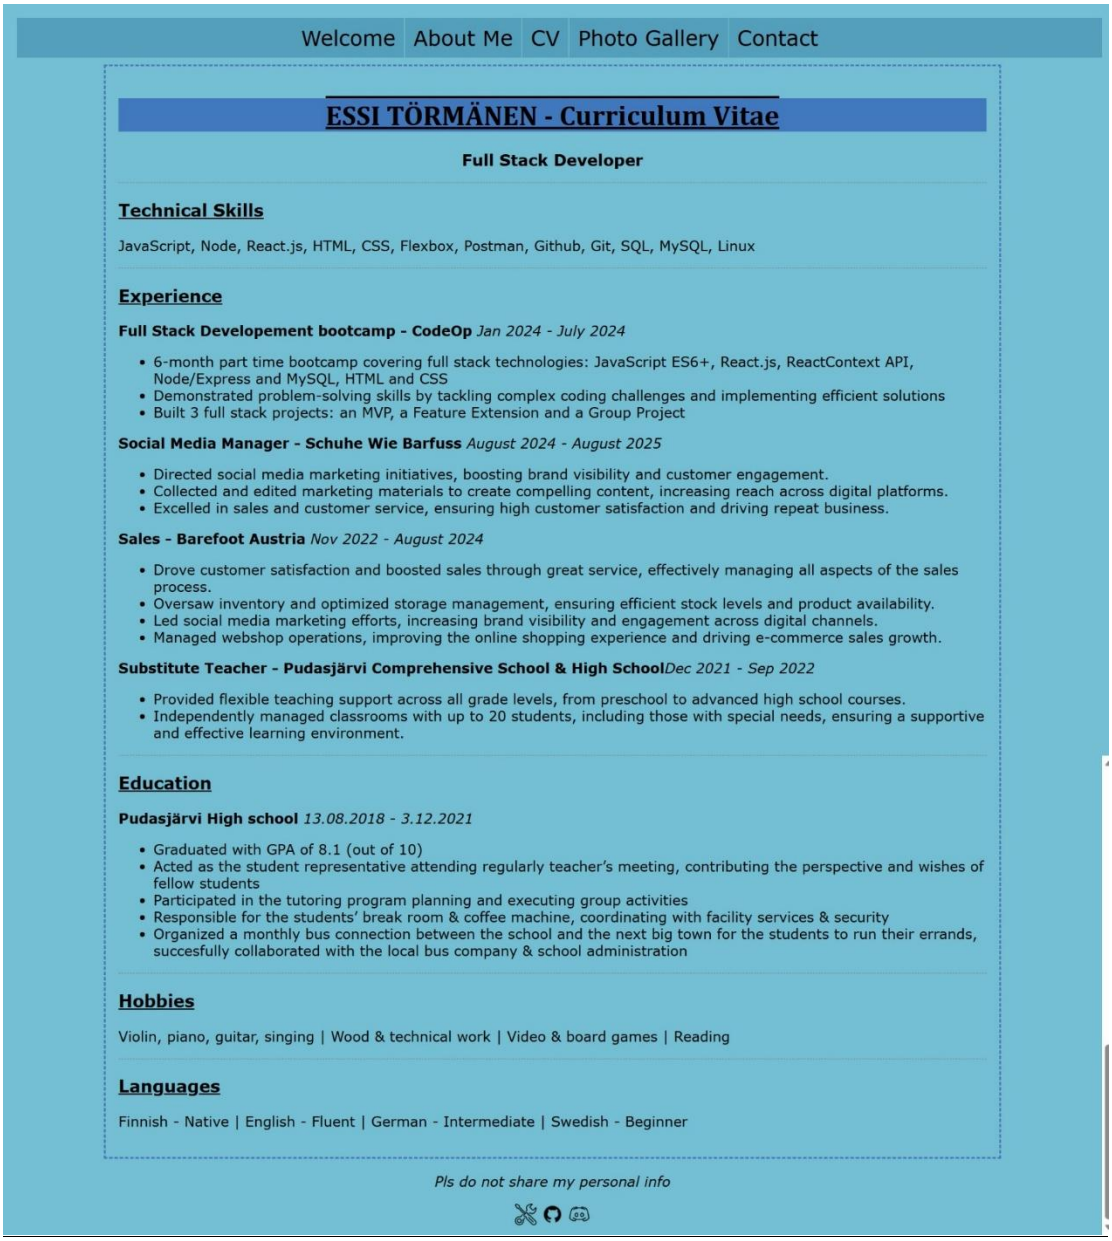
```
/* ABOUT ME ABOUT ME ABOUT ME*/
.sectionOneContainer {
    display: flex;
    /* align-items: left; */
}

#description {
    /* background-color: #3e89bea7; */
    padding: 5px;
    /* height:fit-content  */
}

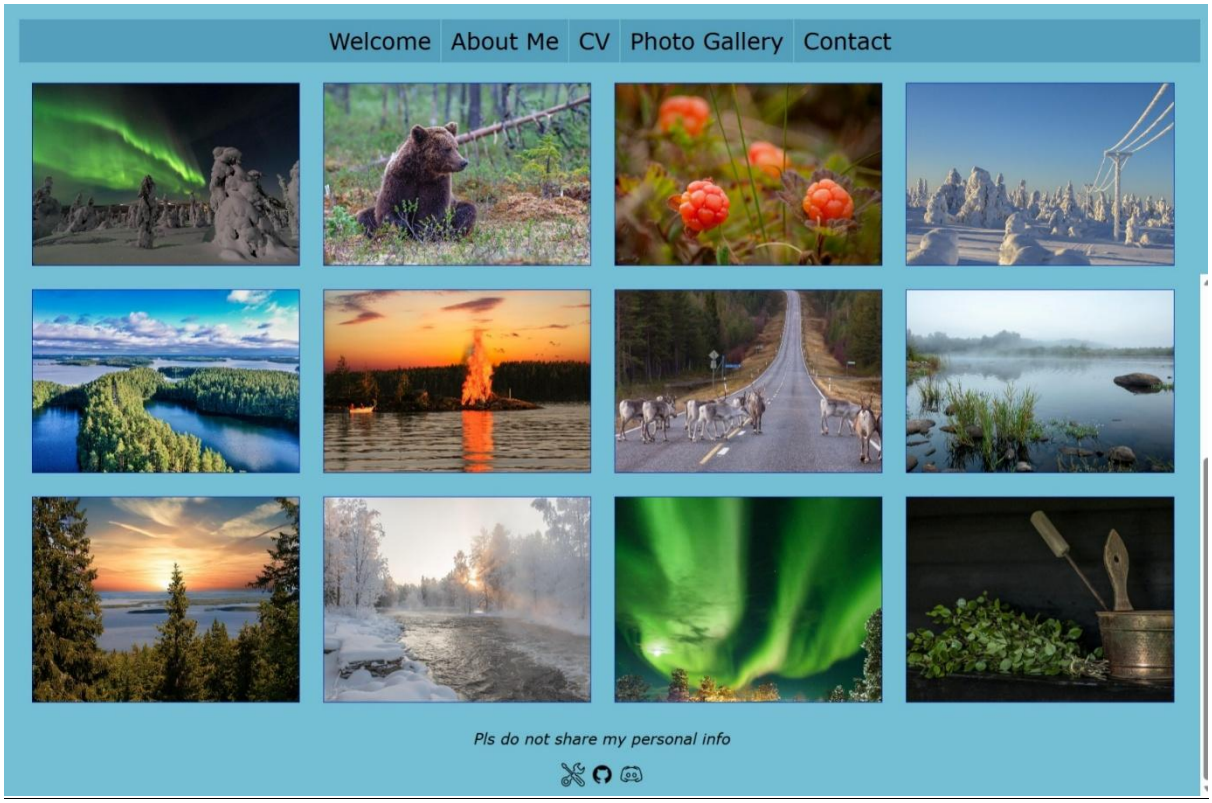
#about-body {
    margin: 0 auto;
    width: 80%;
    display: grid;
    justify-content: center;
    border: 2px rgba(6, 6, 152, 0.386) dashed;
    font-size: larger;
}

#about-body h1 {
    margin-left: 50px;
}

```



- Looked at the PDF-File of my CV while coding it in.



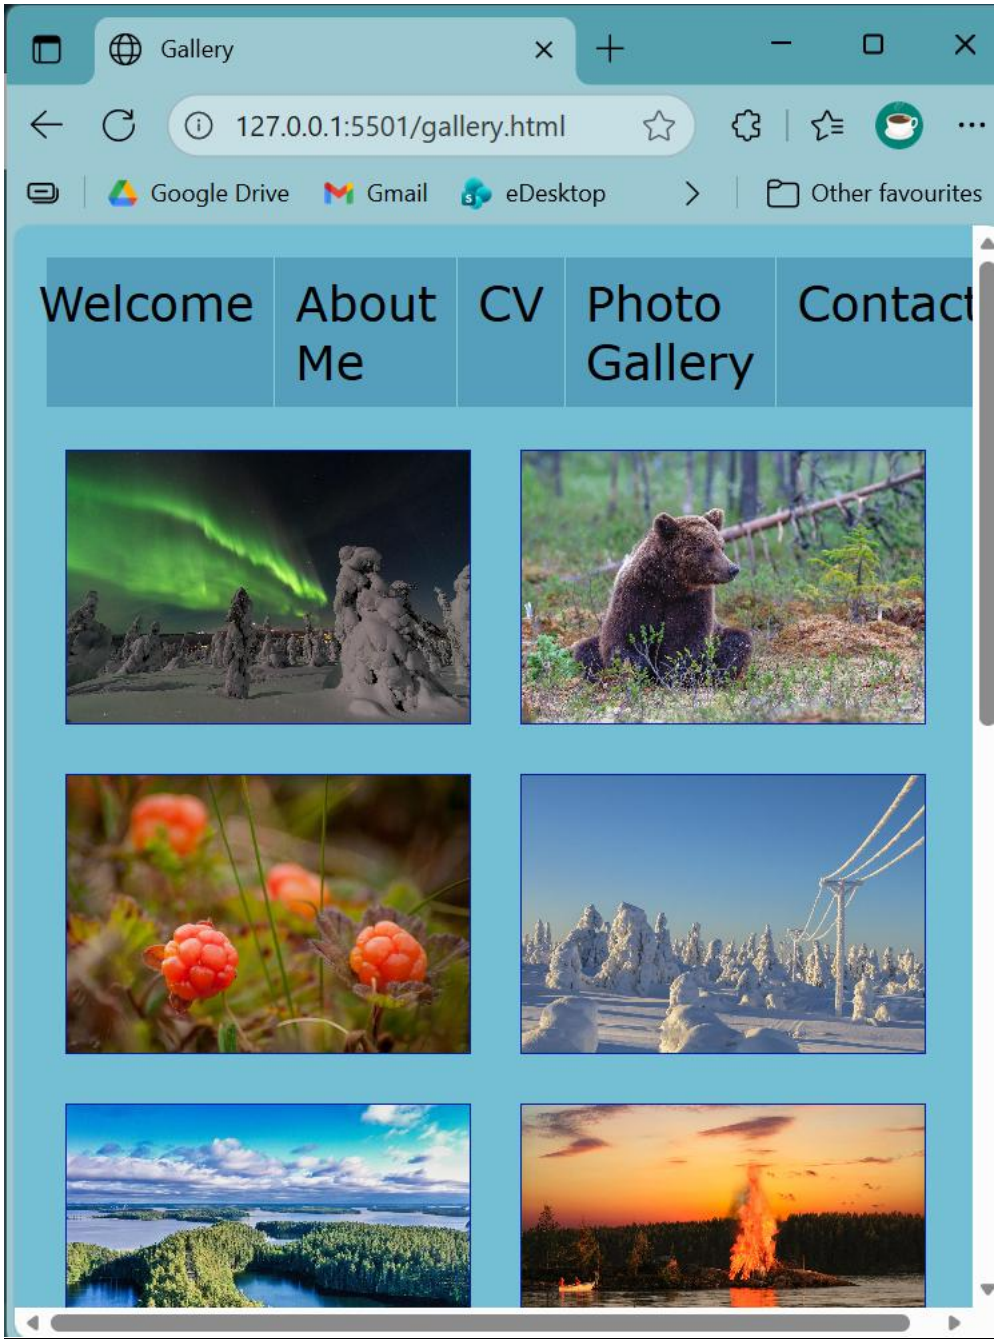
- Gallery:
- Managed to make it responsive with Flex, I followed the W3Schools tutorials for it.

```
197
198   /* I followed the W3Schools */
199   @media only screen and (max-width:768px) {
200       .gallery-item {
201           width: calc(50% - 30px);
202       }
203   }
204
205   @media only screen and (max-width: 480px) {
206       .gallery-item {
207           width: calc(25% - 10px)
208       }
209   }
210
```

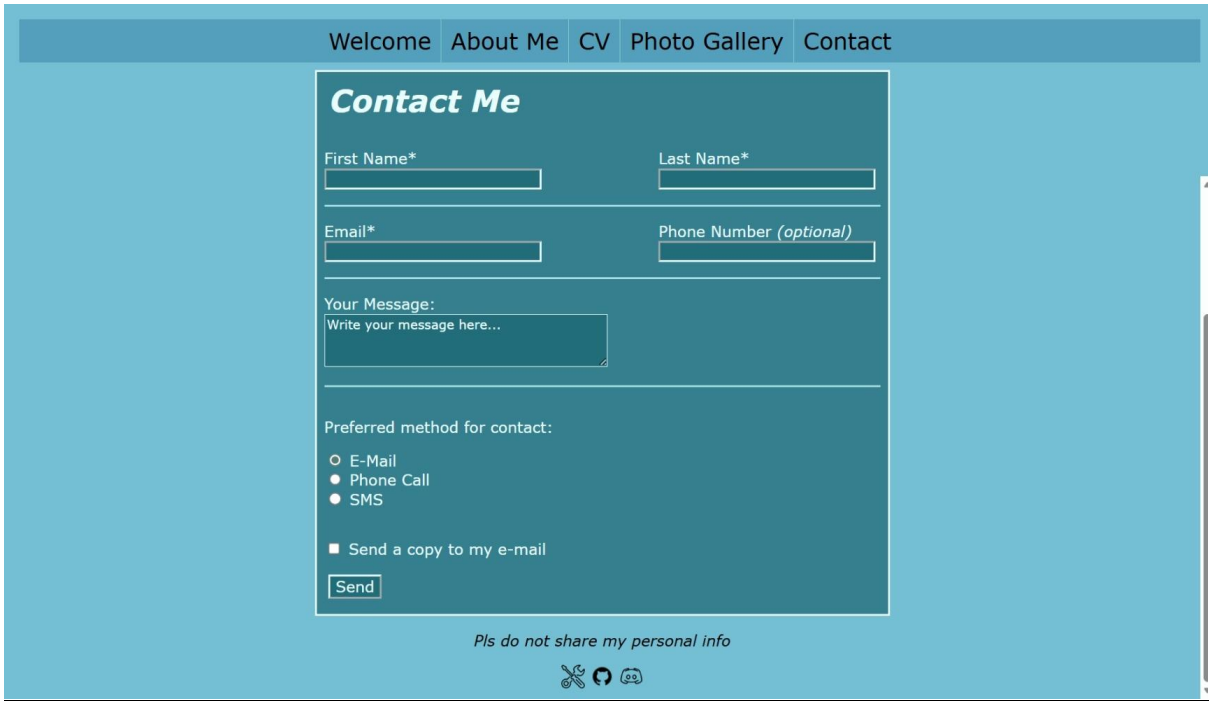
- I wanted to make it a bit more lively by adding the hover over styling, where when you hover over the images, they get zoomed in a bit.

```
/* When hovering over one image, it z
.gallery div:hover {
    border: #ffffff 2px solid;
    transform: scale(1.2);
}
```

-



- It’s responsive; the grid displays only two columns when making the site small.



Contact Form:

- Followed FreeDatacodecamp tutorial.

```
22      </header>
23      <main>
24          <section>
25              <form class="form-responsive">
26                  <fieldset>
27                      <legend>Contact Me</legend>
28
29                      <!-- Here I collect personal information. The first two input fields are set to
30                      <fieldset>
31                          <div class="names">
32                              <div class="fname">
33                                  <!-- I'm using for-attribute to associate the labels to their respec
34                                  <label for="fname">First Name*</label>
35                                  <input type="text" id="fname" size="25" maxlength="30" required />
36
37                              </div>
38                              <div class="lname">
39                                  <label for="lname">Last Name*</label>
40                                  <input type="text" id="lname" size="25" maxlength="30" required />
41                              </div>
42                          </div>
43                      </fieldset>
44
```

- On the line 25, where I give it a class=”form-responsive”, I started making it responsive but I didn’t manage in time.
